RE: RoHS Compliance of Parker Hannifin IPD Products

To Whom It May Concern:

Parker Hannifin Instrumentation Products Division produces instrumentation fittings, valves, and special application instrumentation. The dominant metals used are stainless steel, carbon steel and brass, as well as several various exotic metals used in made-to-order products. Based on a detailed review, Parker Hannifin IPD carbon steel, stainless steel, brass and exotic metal products are compliant with RoHS 3 or Directive 2015/863, which adds 4 phthalates to RoHS 2, Directive 2011/65/EU of the European Parliament and of the Council of 8 June 2011.

Our products do not contain cadmium, mercury, hexavalent chromium, polybrominated biphenyl, or polybrominated diphenyl ether. Our brass products may contain 0.1%-3.7% lead as an alloying element, which is permissible by exemption under Directive 2011/65/EU (RoHS 2), Annex III, exemption 6(c).

This certificate applies to all product families.

If you have further questions, please contact me.

Sincerely,

Steve Adiska
Division Export Administrator
